

Patient Health Summary

Patient Name: Rajkumari

Age: 48 Years

Address: Anand Nagar

Main Health Concerns

1. Weight Gain / Increased Body Fat - Gradual increase in body weight and body fat. Difficulty managing weight despite normal daily activities.
2. Thyroid Disorder - History of thyroid-related problems. Possible association with weight gain, weakness, and fatigue. Requires evaluation of current thyroid function and medication effectiveness.
3. Weakness and Fatigue - Frequent tiredness and low energy levels. Feeling weak during daily activities. Reduced stamina and physical endurance.
4. Gas and Acidity - Frequent gastric discomfort. Acidity, bloating, and gas formation. Symptoms may worsen after meals or certain foods.

Symptoms Reported

- Increased body fat / weight gain
- General weakness
- Fatigue and low energy
- Thyroid-related concerns
- Gas formation
- Acidity / heartburn
- Possible digestive discomfort

Medical Evaluation Requested

- Thyroid function (TSH, T3, T4)
- Causes of weight gain
- Nutritional deficiencies (Vitamin D, Vitamin B12, Iron profile)
- Blood sugar levels (Fasting Blood Sugar, HbA1c)
- Lipid profile (Cholesterol and Triglycerides)
- Digestive and gastric issues
- Any hormonal or metabolic abnormalities contributing to fatigue and weight gain

Questions for the Doctor

1. Is the current thyroid condition adequately controlled?
2. Could the thyroid problem be causing weight gain, weakness, and fatigue?
3. Are there any nutritional deficiencies present?
4. What dietary changes can help reduce acidity and manage weight?
5. Are additional tests or medications required?

Prepared for medical consultation.
